

# DHRITI JINDAL

Software Engineer | Full-Stack & Applied AI Systems

+91 9023628000 | dhritij.work@gmail.com | [LinkedIn](#) | [GitHub](#) | Patiala, India

## SUMMARY

---

Computer Science undergraduate building full-stack and AI-powered applications with Python, TypeScript, Node.js, and REST APIs. Experienced in backend architecture, authentication, data modeling, API integrations, and testing, with hands-on experience building LLM-integrated systems.

## TECHNICAL SKILLS

---

**Languages:** Python, TypeScript, JavaScript, C++, C, Java, SQL

**Frameworks & Libraries:** Node.js, Express.js, FastAPI, Flask, React.js, Prisma

**Databases:** PostgreSQL, MySQL, MongoDB, SQLite, Oracle, PL/SQL

**AI/ML:** LLMs, Embeddings, Semantic Similarity, Gemini API, Sentence Transformers, Hugging Face, LLaMA

**Cloud & Platforms:** AWS (EC2, S3), Linux

**Developer Tools:** Git, GitHub, VS Code, Postman

**Core Concepts:** Data Structures & Algorithms, OOP, DBMS, REST APIs, RBAC, JWT Authentication

## EXPERIENCE

---

### Summer Intern — Nxtra by Airtel

- Developed Streamlit interface features and integrated backend APIs for an AI-powered networking chatbot, improving the user query experience.
- Built an LLM-based question-answering workflow over networking data spanning TCP/IP, DNS, HTTP/HTTPS, and data-center architecture.
- Delivered and tested the application in Python within an Agile team, using virtual environments and API-based AI services.

## PROJECTS

---

### Finance Data Processing and Access Control Backend | *Node.js, TypeScript, Express.js, Prisma, SQLite* | [GitHub](#)

- Built a layered RESTful backend for financial record management and dashboard analytics.
- Secured the system with JWT authentication, bcrypt hashing, RBAC, and Zod validation; added soft deletes, pagination, filtering, and rate limiting.
- Verified reliability with 36 Jest/Supertest integration tests covering authentication, CRUD, RBAC enforcement, and dashboard analytics.

### ProofLine — AI Resume-JD Matching & Factuality Verification | *FastAPI, Python, Gemini API, Sentence Transformers* | [GitHub](#)

- Built an AI-powered resume-job description matching pipeline using semantic similarity to surface skill gaps and generate evidence-based resume rewrites.
- Designed an independent LLM-based factuality guardrail that decomposes each rewrite into discrete claims and verifies them against the original resume, flagging unsupported claims as PASS / REVIEW / FAIL.
- Validated the guardrail on a 34-case adversarial dataset covering fabricated metrics, scope inflation, and ambiguous claims — achieving 100% precision and 100% recall on the fixed evaluation set.

### VoyageVista — Hotel Booking Website | *React, Node.js, Express, MongoDB* | [GitHub](#)

- Built a full-stack hotel booking platform with distinct traveler and hotel-owner interfaces using React and Node.js/Express.
- Secured browsing, booking, and listing workflows with JWT authentication and role-based access control (RBAC).
- Integrated a Hugging Face LLaMA model to generate personalized, day-by-day travel itineraries from live booking data.

## EDUCATION

---

### Thapar Institute of Engineering and Technology

Bachelor of Technology in Computer Science and Engineering

Patiala, India

August 2023 – Present

## LEADERSHIP

---

### Marketing Head & Frontend Contributor, SAIC, Thapar Institute

- Led marketing strategy and digital outreach for SAIC events, driving promotions and frontend UI updates across 2 major alumni-student events with 200+ participants.
